

# RO Membrane Treatment

## **AMEROYAL®C100** - Membrane Cleaner

**AMEROYAL®C100** is a high pH membrane maintenance chemical, designed to remove organics, biofilm and other particulate deposits from all types of membranes.

## **AMEROYAL®C238** - Membrane Cleaner

**AMEROYAL®C238** is a membrane maintenance chemical specifically developed for iron fouling removal. It is also effective against alkaline scaling.

## **AMEROYAL®RCR** - Chlorine Remover

**AMEROYAL®RCR** is used for the removal of residual chlorine from feedwater, prior to reversed osmosis separation systems. This is essential for some types of membranes that are irreversibly damaged by the presence of strong oxidizing agents such as chlorine.

## **AMEROYAL®710** - Antiscalant

**AMEROYAL®710** is a liquid deposit control agent specifically designed to control silica, as well as silicate scale formation, in reverse osmosis (RO) purifying systems. **AMEROYAL®710** is a multifunctional product which exhibits excellent performance in combating the most serious causes of membrane fouling, such as buildup of calcium silicate, magnesium silicate and colloidal silica.
