

# Industrial Equipments

## Oil-Water Separator

1. This product can reduce oil content in waste water up to 50%~90%, and is able to reduce suspended solids.
2. No extra chemical required during process.

### Processing :

1. Waste water inlet : a trash trap used to pre-separate the sediment and dregs.
2. A Disc-separator (Patent of Industrial Technology Research Institute) set in the bottom of the separator to accelerate the oil to surface and coagulant. (No chemical required)
3. Surface oil layer skimmed by a Duo-scraper to the sump .
4. Level Bump sucks processed waste water to Secondary Separator Tank.
5. After second process, the water is ready to be discharged.

## Fuel Homogenizers

This product is able to improve the usage of heavy fuel oil, Through the use of fuel homogenization, fuel sludge reduction and improved combustion can be achieved

it is resulting in cost savings to the power plant operators. Fuel homogenization can also have a positive impact for reducing exhaust emissions and help achieve NOx reduction.

## KARCHER High-Press Cleaners (cold water)

Clean machines, vehicles and buildings daily with high pressure and a high flow rate. Cold water high-pressure cleaners remove even stubborn dirt and are Ideal for large areas.

## KARCHER High-Press Cleaners (hot water)

High pressure cleaners clean even better with hot water at the same amount of pressure. Kärcher machines are convenient to use, and feature state-of-the-art technology.

## Loctite Adhesives/sealant

Product range includes adhesive and sealant solutions for industrial production and maintenance.
